

CONTRACT WITH CONFIDENCE

Well beyond our product design and development expertise, you can contract with NAGL MedTech™ to support the manufacturing and final packaging of your medical devices – from catheters and electronic assemblies to orthopedic instruments and more.

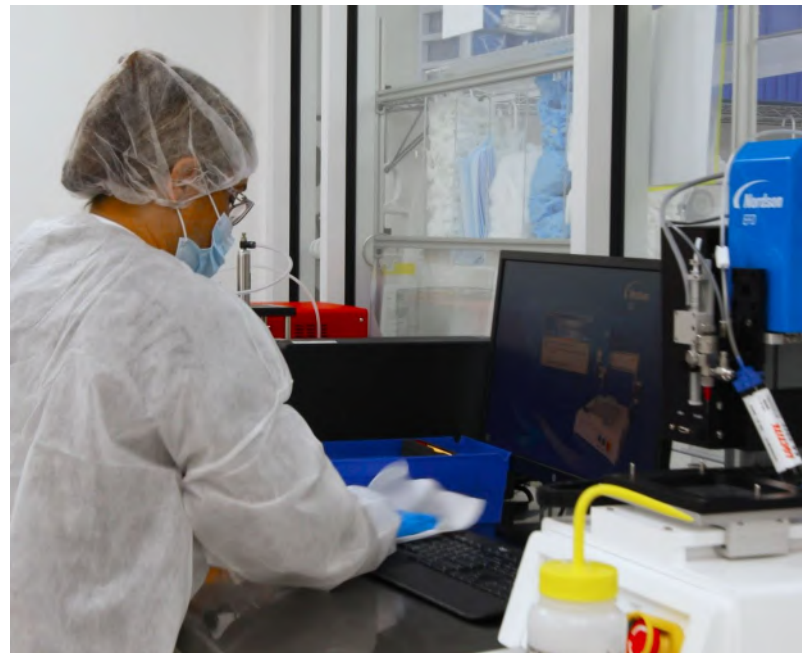

NAGL MedTech™ is ISO 13485:2016 certified in cardiovascular, neurovascular, and more, and

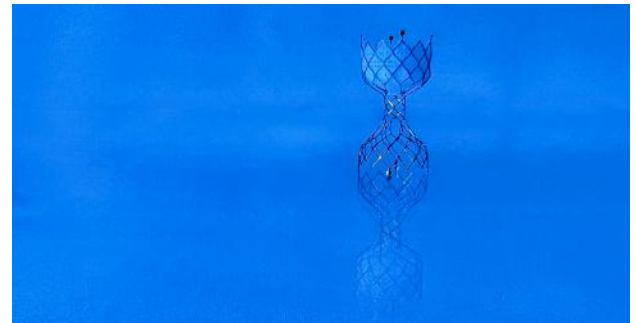

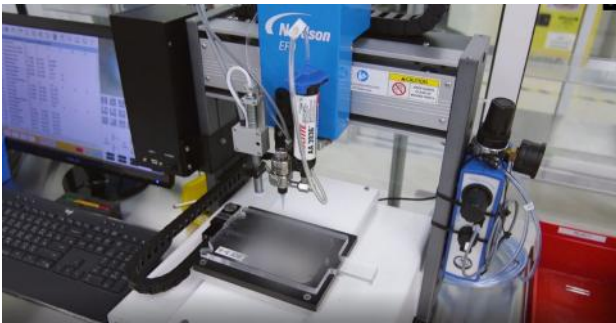

follows a robust quality management system which ensures the highest level of regulatory compliance. Our vertically integrated, FDA registered facility features significant manufacturing equipment

and technology investments, not to mention an experienced operations team to help bring your products to life. Additionally, we can be up and running fast and, more than likely, at a lower initial cost than executing your own line, so you will get to market faster to begin to recognize a return on your development investment.

From manufacturing and assembly, to packaging and shipping, NAGL MedTech™ can handle it all – parts sourcing, sterilization, and palletizing – at a level of quality and confidence that will exceed your expectations.

CAPABILITY, QUALITY, AND CONFIDENCE TO EXCEED YOUR EXPECTATIONS

The Benefits of Working With NAGL MedTech™

Flexible Contract Terms – we recognize that our Contract Manufacturing solution is critical when volumes, capacity, and start-up costs are concerns. That's why we don't lock our clients into long-term contracts. We will work closely with you to develop a manufacturing and delivery plan that ensures you meet your product launch goals.

Equipment and Technology Investment – NAGL MedTech™ has made significant investments in equipment and technologies – so you don't have to – to support our expert Contract Manufacturing capabilities. This helps ensure device quality and consistency while allowing us to be up and running quickly to meet your manufacturing needs.

ISO Class 8 Compliant Cleanroom – now more than ever cleanroom capabilities are at a premium.

NAGL MedTech's™ expert staff are what help to keep our cleanroom Class 8 compliant, to help eliminate the risk of microbial contamination while improving overall product quality.
